

PORTFOLIO

Summary of clients and projects carried out in my current consultancy work

Professional portfolio with anonymized project references by industry sector, with duration scope and a quick description of the activities performed.

Included also 3 sample projects with technology and quality concepts built from the ground up.

Projects

#	Industry	Duration	Project type	Activities
1	Home Improvement / Retail	7 years	Analytics data model, omnicommerce analysis and BI solutions	Enabled a scalable omnicommerce analytics framework by delivering 200+ use cases, reusable data models and BI migration support across multiple reporting platforms.
2	multi-billion-dollar luxury fashion house	3 years	Analytics data model, custom attributions, omnicommerce analysis and BI solutions	Coordinated activities, Developed scalable analytics data models and custom attributions, delivered SQL training on analytics data, AI powered KPI digests
3	Global Tire Manufacturer	5 years	Analytics data model, analysis and BI solutions	Supported analytics modernization by redesigning data models and use cases during the migration from Google Analytics to GA4 and empowering BI.
4	Pet Care Retail	3 years	Analytics data model, omnicommerce analysis and BI solutions	PM, enabled a scalable omnicommerce analytics framework by delivering 20+ use cases integrating online behaviour with Salesforce, Databricks, Data lake.
5	Luxury / Fashion	1 year	Analytics dashboards migrations	Supported complex analytics migration by coordinating agencies, third-party tools, BI requirements and external technical stakeholders.
6	Beverage / Consumer Goods	5 years	BI dashboards and analytics	Prepared data for dashboards, built pipelines and use cases, supported technology migrations for BI solutions.
7	Luxury Travels / Hospitality	2 years	Analytics data model and custom attribution model	Developed analytics data models and custom attribution logic for travel-related customer journey analysis.
8	International Bank Group	3 years	BI solutions	Coordinated team activities and supported delivery governance across customer analytics, reporting workstreams, media communications

#	Industry	Duration	Project type	Activities
9	World's leading in sports equipment	3 years	Analytics data model, analysis and BI solutions, semantic layer	Collected requirements and prepared analytics data for reporting and business analysis use cases, Looker layer, DataPrep solution sold
10	Italy's leading banking group	1 year	Analytics data model, analysis and BI solutions	Collected requirements, developed analytics data models and supported BI delivery for financial services reporting.
11	Multiutility / Energy	1 year	Analytics data model, analysis and BI solutions	Collected requirements and developed analytics data models for energy and multi-utility reporting needs.
12	Leading international manufacturer	1 year	BI solutions and data quality	Improved Oracle performances, delivered a classroom data quality course
13	Fashion / Italian Luxury	2 years	Analytics data model and custom attribution model	Delivered data model and custom attribution logic for lifestyle brand analysis.
14	Telecommunications	2 years	Analytics data model and custom attribution model	Delivered data model and custom attribution logic for customer journey and performance analysis.
15	Italy's leading banking group	1 year	Analytics data model, analysis and BI solutions	Coordinated analytics activities and supported home banking data model, analysis and BI solution delivery.
16	Italy's most prestigious store chain	1 year	Analytics data model, analysis and BI solutions	Coordinated activities and supported analytics data modeling, analysis and BI solution delivery.
17	Electrical Engineering / Energy Services	1 year	Data quality training	Delivered a training course focused on analytics and data quality practices and solutions
18	Tourism / Experiences	5 years	Analytics data model, analysis and BI solutions	Collected requirements and prepared analytics data for analysis and BI reporting use cases.
19	Europe's leading payment technology	2 years	Advanced analysis	Collected requirements and prepared data to support advanced analysis and models training

#	Industry	Duration	Project type	Activities
20	Education / Learning	4 years	Analytics data model, analysis and BI solutions	Collected requirements and prepared analytics data for analysis and BI reporting use cases.
21	Italy's leading online parapharmacy	1 year	Analytics data model, analysis and BI solutions	Collected requirements and prepared analytics data for analysis and BI reporting use cases.
22	multinational electricity distributor	2 years	Technological migration	Migration from a BI-platform to a Data Lakehouse architecture

Data quality – Intelligent data monitoring powered by AI

Executive Summary

La settimana registra una forte espansione dei volumi di acquisizione (+18% Sessioni WoW), che tuttavia non genera valore a causa di un drastico calo della qualità del traffico. L'aumento del **Bounce Rate (+39%)** e la contrazione delle **Impression (-14%)** indicano che i nuovi utenti atterrano ma non navigano, diluendo il Conversion Rate (-31%) nonostante un funnel di checkout tecnicamente performante.

Key Highlights

- Bounce Rate:** 62% (+39% WoW, +60% YoY). L'anomalia statistica più rilevante (forza "moderate"): il traffico acquisito non trova corrispondenza con le aspettative sulla landing page o include una quota elevata di bot.
- Sessions vs Impressions:** Sessioni 809k (+18% WoW) vs Impression 7.8M (-14% WoW). Discrepanza critica: l'aumento di traffico non si traduce in navigazione del catalogo, suggerendo un problema a monte (targeting campagne) piuttosto che di UX in pagina.
- Conversion Rate:** Valore in calo (-31% WoW). La flessione è puramente matematica, causata dall'aumento del denominatore (sessioni non qualificate), dato che l'efficienza del checkout è in realtà migliorata.

Analisi Approfondita

Acquisizione & Qualità del Traffico

Si osserva un picco di traffico notevole (+224% YoY), ma la qualità è fortemente degradata. Il **Bounce Rate** è passato dal 44% (media 8 settimane) al 62%. Come indicato dalle logiche di business, un aumento così marcato suggerisce una discrepanza tra l'annuncio pubblicitario e il contenuto della landing page, oppure l'ingresso di traffico "sporco" (bot o display network a bassa rilevanza).

Navigazione & Interesse Prodotto

Nonostante l'aumento degli utenti, le metriche di interesse sono in sofferenza. Le **Product Detail Views** calano del 7% e il **PLP Add to Cart** crolla del 46%. Questo conferma che l'utenza aggiuntiva non sta interagendo con il merchandising: non si tratta di stock-out (che influenzerebbero l'ATC in PDP), ma di mancato arrivo ai prodotti. Gli utenti rimbalzano prima di poter valutare l'offerta.

Conversione & Checkout

Nota positiva sul fondo del funnel: il **Checkout Conversion Rate** sale allo 0.76% (+7% WoW). Chi riesce a superare la barriera iniziale naviga e acquista con maggiore efficienza rispetto alla media storica. Non vi sono frizioni tecniche o problemi di costi di spedizione nel checkout, il problema è interamente circoscritto alla fase di *Awareness/Consideration*.

Action Items & Next Steps

- Audit Sorgenti Traffico (Marketing):** Analizzare le campagne attivate o scalate nell'ultima settimana. Isolare i canali con Bounce Rate > 70% e valutare lo spegnimento o la revisione del targeting/creatività.
- Verifica Bot/Spam (IT/Dev):** Dato il picco anormale di sessioni e bounce rate, verificare i log per escludere attacchi bot che potrebbero sporcare i dati e consumare budget server.
- Landing Page Alignment (Store/Merch):** Verificare le landing page delle top campagne per assicurarsi che i prodotti mostrati siano coerenti con la promessa dell'ad (es. disponibilità stock, prezzi visibili).
